

New Features for Point of Sale Professional Version 4.05

The 4.05 version of Point of Sale Professional has been enhanced with new manager capabilities, new reports, and new features for voided transactions.

View Unencrypted Credit Card Number

An option was added in Manager Maintenance to view unencrypted credit card information. Check this field to allow managers to view a customer's unencrypted credit card number. This option allows the manager to view the customer's full credit card number on historical transactions available in the Point of Sale Entry window and inquiries. If this option is not selected, the manager will only be able to view the encrypted number on historical reports and inquiries. (See page 117 of the *Point of Sale Professional Manual* for more information.)

Tab Sequence Includes User Defined Fields

In Transaction Type Maintenance, UDF's (User Defined Fields) are now included on the list of available fields to include in the tab sequence. (See page 80 of the *Point of Sale Professional Manual* for more information.)

New Monthly Recap Reports Available in Reports Menu

The following reports have been added to the Reports menu and can also be printed during Period End Processing:

- Monthly Recap by Product Line - This report summarizes the sales data for each product line sold during the current month. (See page 282 of the *Point of Sale Professional Manual* for more information.)
- Monthly Recap by Warehouse/Product Line - This report summarizes the sales data for each warehouse and product line sold during the current month. (See page 284 of the *Point of Sale Professional Manual* for more information.)
- Monthly Recap by Warehouse - This report summarizes the sales data for each warehouse during the current month. (See page 286 of the *Point of Sale Professional Manual* for more information.)

- Monthly Recap by Division - This report summarizes the sales data for each company division during the current month. (See page 288 of the *Point of Sale Professional Manual* for more information.)
- Monthly Recap by Location - This report summarizes the sales data for each store location during the current month. (See page 289 of the *Point of Sale Professional Manual* for more information.)

Voided Transactions

Voided transactions can now be printed from Point of Sale Entry and from Transaction History Inquiry. When printing voids, the word "VOID" will appear on the bottom of the receipt. (See pages 173 and 255 and of the *Point of Sale Professional Manual* for more information.)

When a transaction is voided, the cashier who voided it and the reason for the void are retained. These fields are displayed on the Transaction Detail window in Point of Sale Entry and Transaction History Inquiry.

The Voided Transaction Report was added in the Reports menu to track who is voiding transactions and the reason for the void. It can be sorted by Transaction Number, Transaction Date, Cash Drawer Number, or Customer Number. (See page 290 of the *Point of Sale Professional Manual* for more information.)

Change in Location Maintenance Form

In the 4.05 release of Point of Sale Professional, the definition field, Standard Transaction Type, was replaced with Reference No. on the Details tab of the Forms Customization window available in Location Maintenance. (See page 99 of the *Point of Sale Professional Manual* for more information).
